**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Britzke, et al. (U.S. Patent number 5,931,542) in view of Jelinek (U.S. Patent number 4,702,657).

Britzke teaches a tool assembly with tool, retainer sleeve and washer. Britzke fails to teach the layer of compressible material bonded to the inner annular surface of the washer.

Jelinek teaches a washer with a layer of compressible material bonded to the inner annular surface of the washer; which is disclosed as being able to facilitate preassembly and handling.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Britzke assembly to have the layer of compressible material bonded to the inner annular surface of the washer as called for in claim 1, in order to facilitate preassembly of the tool.

With regards to claim 2; it would have been obvious to one of ordinary skill in the art at the time of the invention to have made the inner surface of the compressible

material to have a diameter less than the mounting hole; since Jelinek teaches the same.

With regards to claim 3; Jelinek teaches the elastomeric member.

***Allowable Subject Matter***

2. Claims 4-15 are allowed.

The prior art includes Papenguth (U.S. Patent number 3,259,404) and Dimitry (U.S. Patent number 3,726,178) which teach similar washers. The prior art of record fails to disclose or suggest such an assembly in which the washer fitted around the shank of the tool and is retained against rotation with the tool.
